President's Message From the Editor News & Notes CW Academy How We Were – N3RS CWops Tests CWops Members Awards New Members Nominees QTX Report Operating Events 2015 Financial Report

President's Message

One month into 2016 we are seeing some interesting CW activities. The DXers have had a chance to chase down K5P and VP8STI, and the contesters have had a selection of

international and regional radiosport events. Of course, our stalwart CWTs are a Wednesday/Thursday staple.

Now into my second year of "semiretirement" I feel busier than ever. Lord only knows what full retirement will be like ⁽²⁾. I have a few tasks to do this week. One is to order the medallions for those who earned CWT Participation Awards and QTX awards. I also have to get the plaque for the top winner of QTX. The medallions are ordered through a company in the US but the foundry that makes them is in China.

[Continued on next page]

So it can take five to six weeks for the medallions to be struck, and another week for them to be delivered to me. Then, with my wife's help, we get lots of sturdy envelopes and start cranking out the mailing labels. Then we match the labels to the award winners and try to make sure they get the correct medallions. Then comes the fun part – taking the envelopes to the local post office for mailing. Every one that goes outside the US – even to Canada – requires a customs statement and tag. Those have to be done by hand, and after a few dozen of them, my sending hand gets really tired. But I know those of you who earned the medallions will be happy to receive them, and that makes the whole effort worth it for me.

We are nearly mid-way through the Jan-Feb semester of CW Academy and I'm advising three different groups this time. They are all Level 3. I have two learners in the UK whom I meet with on Mondays and Thursdays at 1 PM PST, a group of four western US students who get together with me at 7 PM PST and a group of three at 8 PM. I sure enjoy it and all 9 students have already told me that it is making a huge difference in their skills.

In March, as things now stand, I will be gone from 1 March to 31 March in 4X-land (on business). I'm toying with taking a K3 and Buddipole with me, but probably not. So I'm going to miss a whole bunch of CWTs and probably be suffering from terminal CWT withdrawal symptoms when I return. By then, the April-May CW Academy semester will be ready to begin, so no rest for the weary.

You may remember that a few storms back my yagis were twisted clockwise well over 100 degrees off heading. Without having to climb and put things back, this last set of storms resulted in me now being just -10 degrees off heading ⁽²⁾. Patience is a virtue in Santa Cruz, California. I recently went through my station and replaced all the ground lines going from radios and amps with new ones. Why? Because I had a 14 ohm resistance between the chassis of radio 1 and radio 2. Now it is barely detectable resistance. Funny thing, too, a whole lot of ground loop thumping and other noise disappeared when I was done. So, now everything is working – the feedlines, the antennas, the grounds, the paddles. So I'm turning my attention to a plan for establishing a Youth CW Academy as I mentioned last month. When it's ready to be reviewed, I'll pass it on to some critics for sanity checking. I hope to share the plan with the membership in a month or two.

Hope you are enjoying your new year and living up to your resolutions.

73,

Rob K6RB

From the **Editor**

No New Articles!

Well, our winning streak has ended. For the first time in recent memory, we have no individual articles in *Solid Copy* this month. There is plenty of good material in the regular columns and the annual *Financial Report*, but as Editor I am ashamed to admit that I was unable to coax any articles out of our

membership. So let me repeat – you do not need the literary skills or productivity of a Shakespeare, Faulkner, or Asimov, or even the more pedestrian ones of my best-selling schoolmate Nora Roberts (whom I did not know) to write for *Solid Copy*. Anyone can write up his or her ham radio story. Those with technical know-how can describe a device they built for the shack. Those with operating skill can provide guidance for others. Those with an ax to grind can grind it, provided it's in good taste. Don't worry if you got a C- in English Composition, either. Editorial services here are free and worth every penny you pay for them, maybe a bit more. So c'mon, gang, sharpen up those pencils, warm up those word processors, and become an honored *Solid Copy* contributor!

Another note from the Journal of Irreproducible Results: Your humble(d) Editor lost his SteppIR in action a week ago. It was a sudden failure while transmitting, just the opposite of what typically happens with water in the coax, but that's what it appeared to be. So I got out my trusty antenna analyzer which claimed that the fault was maybe 160' (50 m) from the shack. At first, I feared that that might be atop the tower. But a coil of wasted length under the deck and a tape measure showed me that 160' of feedline couldn't possibly make it all the way to the top. The feedline had a really nice looking splice near the bottom of the tower that might conceivably be the culprit, but it was really, really, secure! It took ample sweat, some tears and almost some blood to cut through the layers of electrical tape and that thick, self-curing stuff, but the analyzer then showed me that the antenna was good down to the base of the tower. Phew, no crank-up tower climbing required! Another very clean splice under the ham shack window also looked good and tearing it open proved that the fault wasn't in the segment between the tower and the house, either. So I re-tightened all the connectors using pliers, quickly taped up both joints, and listened again inside. It worked! So I don't know what was wrong, but it's "fixed" now, albeit with rather slipshod taping. All I have left to do is remove the rest of the old, self-curing goop (very tough!), re-apply, and wait for the problem to recur. Grrr!

Enjoy this issue of *Solid Copy* and, as usual, let me know what else you want to see here. And, per my humble plea above, please send some articles!

73,

Rick N6XI Editor

News & Notes

Jerry Weisskohl AC4BT

This is a column where members can report their activities, happenings and achievements, both radio-related and personal. Please send brief notes to Jerry AC4BT at <u>invesskoh@gmail.com</u>.

<u>Atsu JE1TRV</u>: Happy New Year! This is the final report of the first JA CW Academy (CWA) held in Nov. and Dec. 2015. Two students (Dai JE6JAR and Hisa JR2WLT) have successfully completed 16 sessions /2 months Level-1 course on Dec. 29, 2015. We issued the certificates to both of them. One of the students, JR2WLT, sent us the photo below, a proud face full of smiles!

The envelope in his left hand is the application to the JA licensing authority asking to add the CW mode to his station license. (In JA, we have two kinds of licenses: operator's license and station license. And we need to amend the station license when we want to add a mode, band, etc.). I hope Hisa will debut on the bands soon.

During the course, we felt the current text is not perfect for JA beginners in some parts. So we will study how we should improve the text moving forward. I'll have to ask Stephen to update the contents of the JA version of 'Morse Trainer' later.

<u>Mike VE9AA</u>: Ordered my second N3ZN paddle a month before Xmas and used it for the first real workout in the NAQP CW this past weekend. The ZN-9DX is a keeper (and so is the miniMITE paddle I have in the MINI)!

Check them out – I am sure you won't be disappointed. I sure wasn't. Anyone wanna buy a set of Benchers? (hi)

Dave AF5DM: I was happy to qualify for the CWOps-participation bronze medal for the 2015 year. It's hard to do the early morning session sometimes, being a working stiff. However, I had lots of fun doing the Wednesday afternoon session from work, using my FT-817(QRP) to a 20m Hamstick on the top of my car's roof from the parking lot.

I usually can only make 11 or 12 contacts before my conscience pushes me to get back to work. These 2-way contacts are enabled by other CWT ops who have much better antennas. My hats off to them for their good ears and their patience to QSO with little guns like me! Next year I am shooting for a silver medal. (Last year I had a late start, didn't start reporting my scores until about April).

Fred K6DGW: Technically, I guess that's K6DGW/7. We're getting settled in Sparks, NV and I've gotten the remote to W7RN running very well on both CW and (gasp!) SSB. Entered both NAQPs in January and have been back in the CWTs, 1900Z and 0300Z. I'm just not going to roll out of bed at 0500 local for the first one. AFSK is next. I hope to get into the NAQP RTTY at the end of February.

I was worried that operating remote and not making any RF at home would not provide the fun level that I've enjoyed for so long, but that turns out not to be the case at all. It's my K3 here on my desk, and the fact that the "real radio" is about 45 km away near Virginia City, NV has become irrelevant. And of course, there's the CoAA (Coefficient of Aerial Aluminum) at W7RN that adds to the fun level. :-) <u>w7rn.com</u>

Curt N5CW: Special event station W0W will again be operated this year beginning April 1 through April 15th. The station is operated in support of the University of Southern Mississippi/City of Petal, MS POW-WOW. Although most operators will come from South Mississippi, others may operate by contacting N5CW at <u>ORION346@YAHOO.COM</u> for details.

We want CW to be a big part, but CW operators are in short supply. If you do want to operate, your operating will be from your home QTH. A QRZ web page with all event details will be active during this two week period explaining the event. N5CW will handle all QSLs.

CW Academy

Jerry AC4BT, Rob K6RB and Will WJ9B

We are now one month into our two-month program and all is going relatively smoothly. Unfortunately, we had several advisors who had to bow out just before we got started and we've had to contact some of those who had already been placed in the Jan-Feb semester and tell them we had to book them into April-May instead.

CW Academy continues to receive at least a handful of student signups every day. Right now the April-May classes are full and we're loading up the Sep-Oct classes. That is too long of a backlog and we lose some during the long waiting period. So, once again, we invite our members to join the CW Academy advisor corps and help us whittle down those long backlogs.

Many of our Level 2 and Level 3 students are being assigned to participate in one or more CWT sessions. When they do, they send name "CWA." That way, all participants can see the contribution of our students to the fun events. However, more than a few have told me that some participants are clearly puzzled when they get "CWA" instead of state, province or country. That should not be their problem; it is our problem.

When the semester ends at the end of February we will schedule our traditional "slower" CWT day for the second Wednesday of March. We should make an effort to participate as our way of saluting these students who have completed their courses and received certificates. So even if you rarely participate in CWT, make a note to do so on the second Wednesday of March, June and November, please.

Finally, we are getting an increasing number of non-US/Canadian students who want to improve their CW skills. Ideally we will find advisors in the same or adjacent time zones. However, that is even more difficult than finding advisors in the US to handle US signups. Consequently, we are now considering pairing up non-US signups with US advisors who have the time flexibility to work with these students. For example, this semester Rob K6RB is advising two UK students, M0GKK and G4NVR, by meeting them on Skype at 1 PM PST/9 PM UTC. Because we make use of Skype, there are no issues about propagation. All parties can see and hear each other very well despite thousands of miles of distance.

73,

Jerry AC4BT

How We Were - N3RS

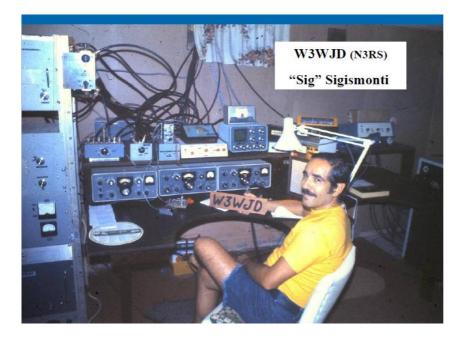

by Hank Garretson W6SX

CWops #34.

"Sig," a native of Philadelphia, was first licensed as WN3WJD in June, 1953. He started out with homebrew equipment and a dipole. He quickly became interested in CW. He entered his first radio contest in 1954 and has been a consistent participant in the major DX contests ever since.

Below is Sig a few years later.

Please send YOUR How We Were Photos to w6sx@arrl.net

CWops Tests

by <u>Rich Ferch VE3KI</u>

First, a reminder that the March 9 CWTs coming up will be special slow-speed CWTs (20 wpm or less). The CW Academy profs encourage their students and graduates to participate in these events, but it can be very intimidating to a newcomer to hear so many people rattling along at 30-35 wpm. Please take the time on March 9 to slow down and not scare the CWA graduates away.

The order for the participation award medallions is now in process. It will take several weeks for the order to be fulfilled, and then the awards have to be mailed out, so please be patient.

I see that some of us have been using the CWTs for various kinds of experiments and self-training. Quite a few have been giving remote operating a try, and the CWTs are a great place to work out some of the kinks. Jim N3JT has even been experimenting with dual-QTH operating, with one local station and one remote. I never know when I hear his call sign which location he is calling from. This last is not something you can do under "real" contest rules, but the CWTs are a more relaxed environment.

Another thing you can do is try out various forms of spotting assistance to see how well they work for you. In this morning's CWT I used CW Skimmer as kind of a local DX cluster. CW Skimmer is a great tool for working a DX pileup – you can quickly see what frequency the DX is listening on by looking for 599 from someone in the pileup. I found it much less helpful in the CWT, though. In fact, it was more of a distraction than a help.

I prefer the Reverse Beacon Network (RBN) over CW Skimmer for contesting (as opposed to DXing), as it keeps track of all bands simultaneously, provides information on which bands are open, and generally keeps the band maps in my contesting software full. Still, in the CWTs I find that I prefer to operate unassisted. Maybe that's because with spotting assistance there is so much information being displayed in such a short time that my decision-making circuits get overloaded!

There are lots of other things to try. Got a new paddle? The CWT is a great place to try it out. Want to get more familiar with your contesting software? Try out its features in CWTs. And what better place to give QRP a whirl to see what it's like than a CWT?

We do the CWTs because they're fun; let's all make sure they continue to be fun for everyone.

73,

Rich, VE3KI

CWops Awards

Pete W1RM and Peter W1UU

The Annual Competition Award (ACA) is based on the number of members worked each calendar year. You get one point per member worked, once per year. It resets to zero at the beginning of each year. The Cumulative Member Award (CMA) is based on how many members you've worked since January 3, 2010 on each band and continues to grow in perpetuity. The CW ops Award Manager (CAM) software, available at no cost, will help you keep track of your ACA and CMA totals.

QTX Report

Enjoying the Art of Conversational CW

by John Huffman K1ESE

QTX is a way of counting conversational CW QSOs. One point is awarded for each QSO of 20 minutes or longer. We have two ways to recognize QTX activities - the QTX Plaque and the QTX Achievement Medal.

We are off again on a new year of QTX. Participation has been up over the last year and we would appreciate your report, large or small. Just count up your monthly total of CW conversations lasting 20 minutes or longer.

QTX Standings

Each year we list the monthly and year-to-date QTX points for reporting stations. Each year the competition is wide open. With just one month's tally under our belt, here are the QTX standings -

WB6BEE	72
K1ESE	65
KI4XH	56
N5IR	54
K5KV	51
AC4BT	43
K5YQF	36
K4AHO	32
NN6T	28
KB6NU	26
N1ZX	23
KC0VKN	18
W3WHK	12
K6RB	9
KE6OIO	9
I5EFO	5
K3TN	4

N9SE 3 W5JQ 2

Everyone had a 'personal best' for the year ... so far.

Don WB6BEE is off to an early lead again this year. Next is the champ from four years ago K1ESE, followed by the champ from two years ago K14XH, followed by last year's champ N5IR.

We totaled 548 QSOs and 19 participants. We hope to grow from there.

But, you don't have to have a top score to be a winner. We award QTX medals for the following totals at the end of the year -

Gold Medal400 QTX pointsSilver Medal300 QTX pointsBronze Medal200 QTX points

It will be fun to see if you can accumulate the contacts needed to reach each level. Average about 18 rag chews each month to receive an award.

Good luck with your totals and enjoy making new friends and chatting with your regular pals.

Thanks to all for your participation.

Upcoming CW Operating Events

Joe Staples W5ASP

This brief list of operating events is intended to provide members with options for using and improving their CW skills in less intense and more casual on-the-air activities.

The ARRL has come up with another rather unique operating activity. The National Park Service will celebrate its 100th anniversary this year. The ARRL has created the *National Parks on the Air* program to recognize this event. Amateur radio activity will be encouraged from each of the more than 483 official National Park Service administrative units and affiliated areas across the US. This includes all 59 National Parks as well as National Battlefields, Historic Sites, Memorials, Preserves, Reserves, Rivers, Seashores, National Scenic Trails, and other units. Further details may be found at: http://www.arrl.org/npota.

A number of web sites have been created to support *NPOTA*. A list of events scheduled to take place within the upcoming (10 day) period as well as full list of all scheduled events is at: <u>https://npota.arrl.org/nps-events.php</u>.

There is a listing of the many NPS Units at: <u>http://www.arrl.org/npota-list</u>. An interactive Google map of NPS sites can be found at: <u>http://www.spinmap.com/npota-sota/map.html</u>. While CW contacts may be somewhat in the minority, it's still worth looking into. In this instance, checking the cluster spots may help identify the players

Both the ARRL DX CW and the Russian DX contest should be familiar territory to most CW operators. Both provide the opportunity to work a wide range of DX entities staffed by experienced operators. Even short periods of checking the bands can be quite productive.

The Stew Perry Topband Distance Challenge has become a major low band event with over 800 logs submitted this past year. While it enjoys strong activity, is somewhat less congested and perhaps a bit more "friendly" than other 160 meter contests. This provides more chances for the modest station to make DX contacts. It is CW only.

If things get dull, try one of the sprints or state QSO parties. There's enough to go around.

Till next time ... Keep on pounding.

FEBRUARY/MARCH EVENTS
