Fileset - Latest Version 1.1.2 October, 2nd 2007

(1.1.2 supports current IARU age catgeories for International RufzXP Toplist functions and minor bug fixing, there are no more changes compared to 1.1.1.)

Languages currently supported: 🇬🇧 English, 🇩🇪 German, 🇮🇹 Italian, (more languages to come soon)

RufzXP_FW2_0_Setup_1_1_2.exe (Installer version, selfextracting 2.5 MB)

RufzXP_FW2_0_Setup_1_1_2.zip (without Installer version, zipped 2.2 MB)

The RufzXP software is of course free of viruses and other malware (and free of advertising as well).
Unfortunately some oversensitive virus scanners in rare events may give false alarms.
To double-check that download files a virus free you may use an Online Virus scanner with multiple search engines like https://www.virustotal.com/en/

DL4MM & IV3XYM present

RufzXP - Tancredi

*** SHORT INSTRUCTIONS ***

RufzXP sends a chosen number of random selected true amateur radio calls (50 by default) to be typed into the keyboard. After <ENT> key has been pressed, the computer gives its next call. If the call has been copied correctly, the transmitting speed increases: if not, it decreases. Every last call can be heard once again by pressing F6-key (50% penalty). The number of points for each call is primarily related to the CW-speed sent, the number of errors and the length of the call. In addition typing time exerts a minor influence. But it is helpful to think about whether the heard call is useful or not. Tone settings and other options can be modified in Option Form. (F2/F12).

<START> button or F5-key starts the attempt. Good luck!
